Kemin is the Leader in Natural Preservation using Mixed Tocopherals. This is a costly process and many companies cheat the system by purchasing chemically preserved raw ingredients and applying low levels of natural preservation.

Pureluxe uses Kemin's brand "Naturox" in 3 ways:
(1) all raw ingredients such as fresh meat, meals, and fats get stabilized naturally before receiving at the factory.
(2) all the mill where dry ingredients are combined we add dry Naturox to the mix to further support the shelf-life.
(3) at the time of production Pureluxe gets liquid Naturox applied to the fat to stablize the food for 18 - 20 months.

The formula to determine if the enough preservation has been applied is to take the level of fat of the formula (example: Adult Lamb Dog 15% x 2 = 300ppm to ascertain a good shelf life. 20% fat formula x 2 = 400ppm and so on)

You can see the chemical preservative BHA, BHT, EQ and TBHQ are all LESS THAN the minimum limit of detection, which tells you (the customer) that this food has not been handled with chemical preservation in general.
